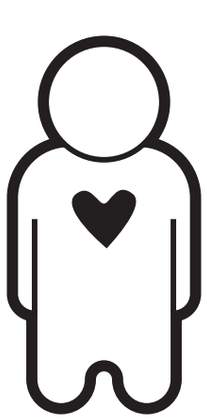
HUMAN CENTERED DESIGN

INTRODUCTION, TOOLS & METHODS

Roberta Tassi



Human centred design (HCD/UCD) is a process in which the **needs, wants, and limitations** of end users of a product, service or process are given extensive attention at each stage of the design process.

PUT THE PEOPLE YOU SERVE AT THE CENTER OF YOUR DESIGN PROCESS TO COME UP WITH NEW ANSWERS TO DIFFICULT PROBLEMS

PRODUCT **SERVICE EXPERIENCE INTERACTION SYSTEM PROCESS**

From the design of a product to the design of an experience or a system, the **growing complexity** designers deal with has raised the need to identify new methods and tools.

UX FOR GOOD DESIGN CHALLENGE

Memorials play an important role of teaching and moving us so that we will never feel detached and complicit again of tragic events that injured humanity. But most of the time when we visit such places, we remain shocked but unable to act beyond that experience. Virtually every visitor to a genocide memorial or holocaust museum can attest to overwhelming feelings of sympathy, sadness and outrage, but **most visitors can also attest that they did nothing substantively differently as a result.**

HOW CAN WE RETHINK THE EXPERIENCE OF THOSE MEMORIALS TO ACTIVATE VISITORS FOR A BETTER HUMANITY?

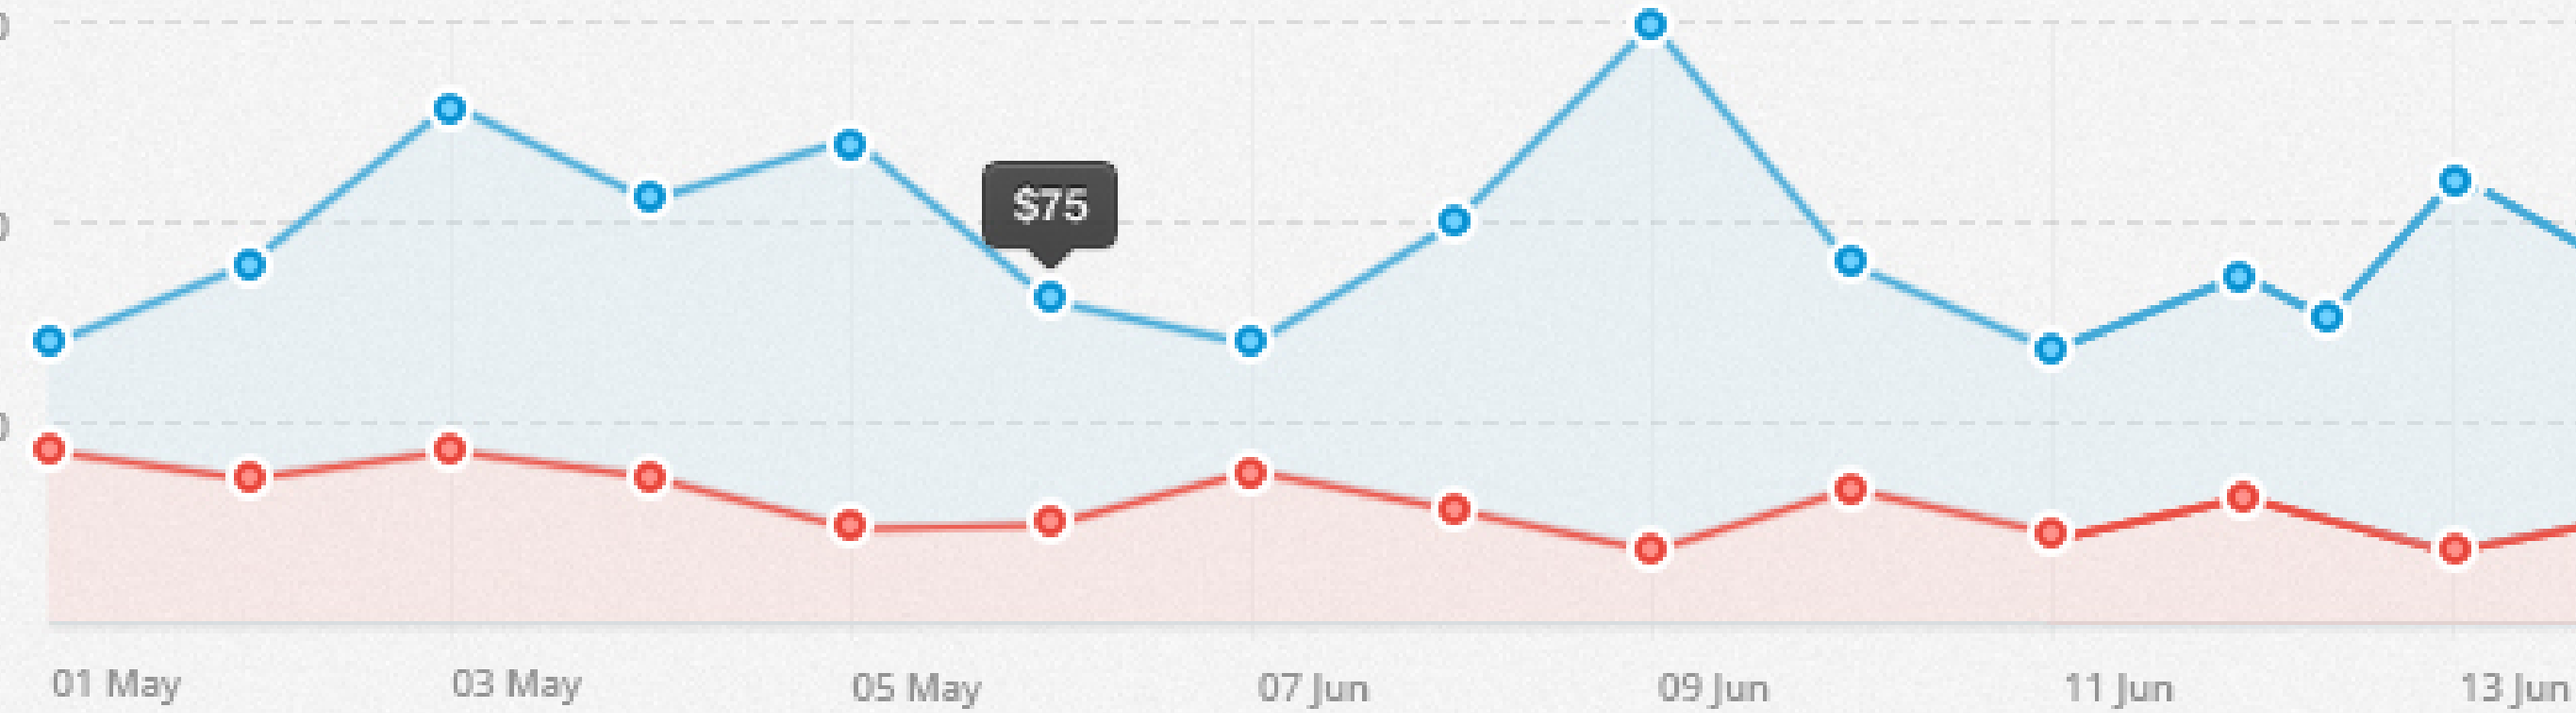
USER RESEARCH

HANDS-ON

User Research is a collection of activities specifically undertaken to **inform and inspire** the design of products and services.

Ottobre 2014 | Politecnico di Milano - Scuola del Design



QUANTITATIVE RESEARCH

Quantitative research generates, refines and evaluates marketing decisions and opportunities.

UNDERSTANDING DEMOGRAPHICS

Numerical

Distant from participants

Large samples

Surveying opinions

KPI Value Determination

What people say

UNDERSTANDING HUMANS

Pictures and words

Close to participants

Small groups

Understanding behavior

Observing action

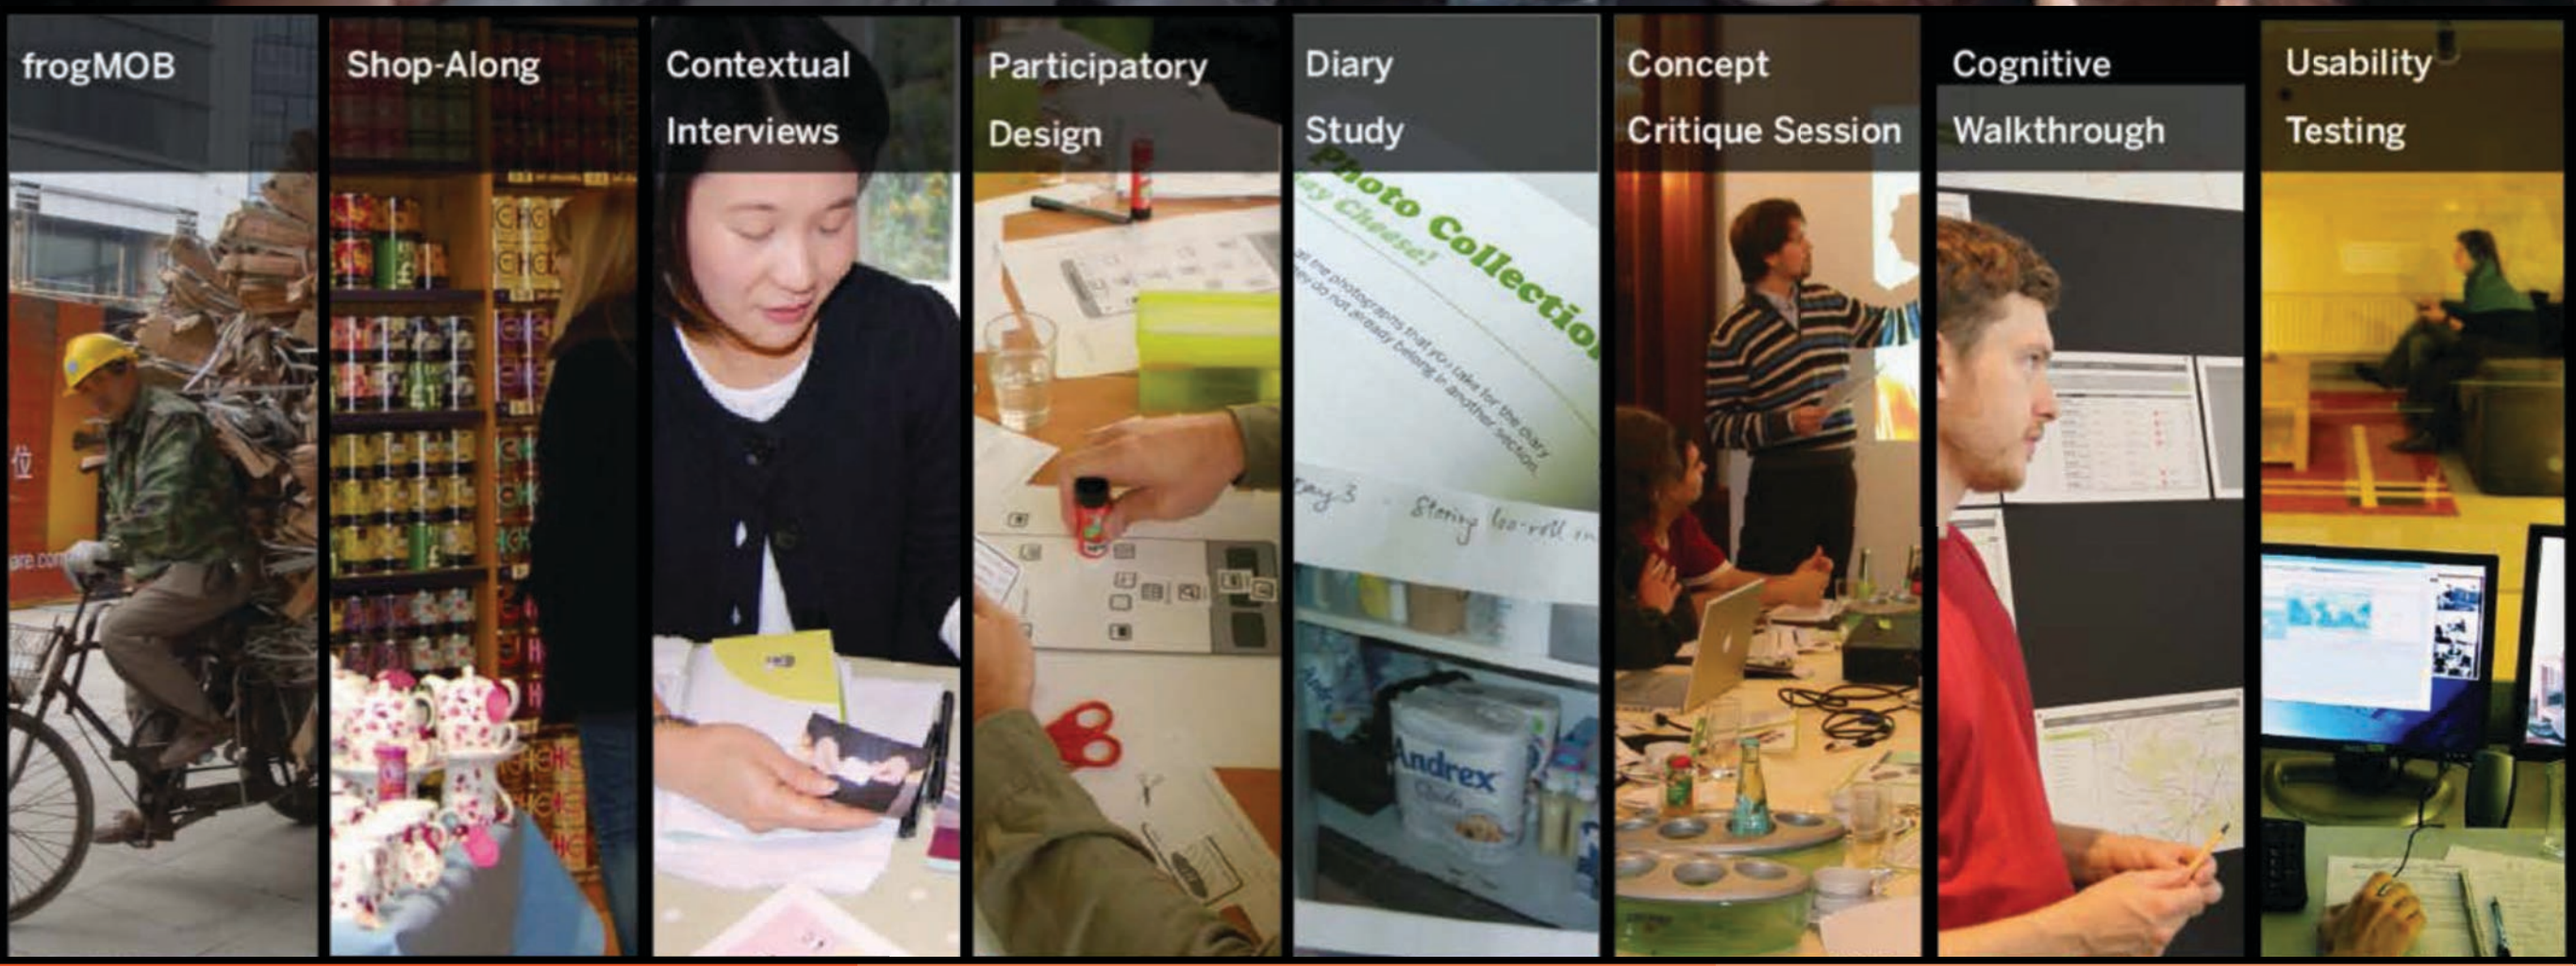
Finding underlying motivations

What people say, do, think.

QUALITATIVE RESEARCH

Design research illuminates human problems, both known and unknown.

USER RESEARCH METHODS



FOUNDATIONAL

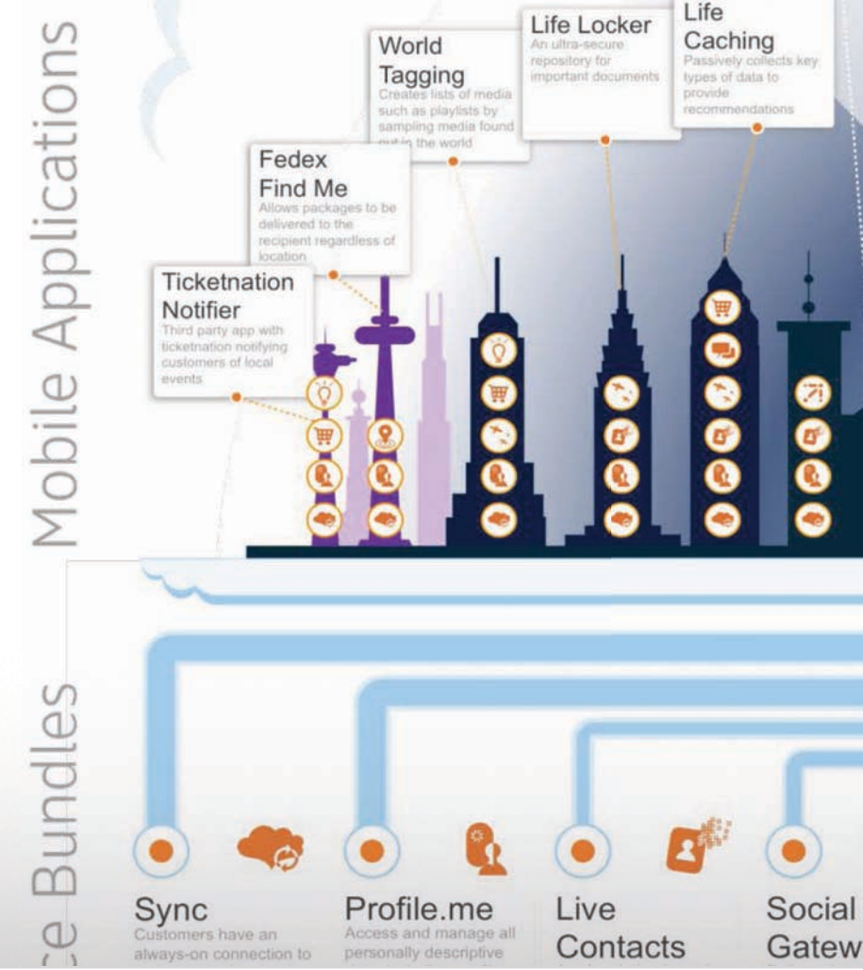
Help us to understand needs

GENERATIVE

Help us to create the right design

EVALUATIVE

Help us get the design right



EXISTING RESEARCH

Establish a solid foundation by looking at existing research.

TREND ANALYSIS

Look at key technology, social and behavioral trends that will have direct impact on the way users will be motivated to adopt and use products in the categories.

STAKEHOLDER & EXPERT INTERVIEWS

Ottobre 2014 | Politecnico di Milano - Scuola del Design

CROWD-SOURCE TOOLS

Believes inspiration can come from everyday life, thus people everywhere are invited to provide photographic insights on a key project topic.

CONTEXTUAL IMMERSION

We go in-home, on-site, and get in-context with a rigorous on-the-ground qualitative research process that generates insights by rapidly immersing the team in the context of use and opportunity.

SHADOWING/ SHOP-ALONG

Observations and interviews in-store elicits insights around shopper expectations and concerns, off-the-shelf impressions and the in store experience.

DIARY STUDIES

In conjunction with a contextual inquiry, diary studies allow participants to reflect more accurately on their own behavior by capturing it across time.

CONTEXTUAL OBSERVATIONS

Interviewing, observing and carefully documenting attitudes and behaviors in the context in which the design solution will be used.

IN-DEPTH INTERVIEWS

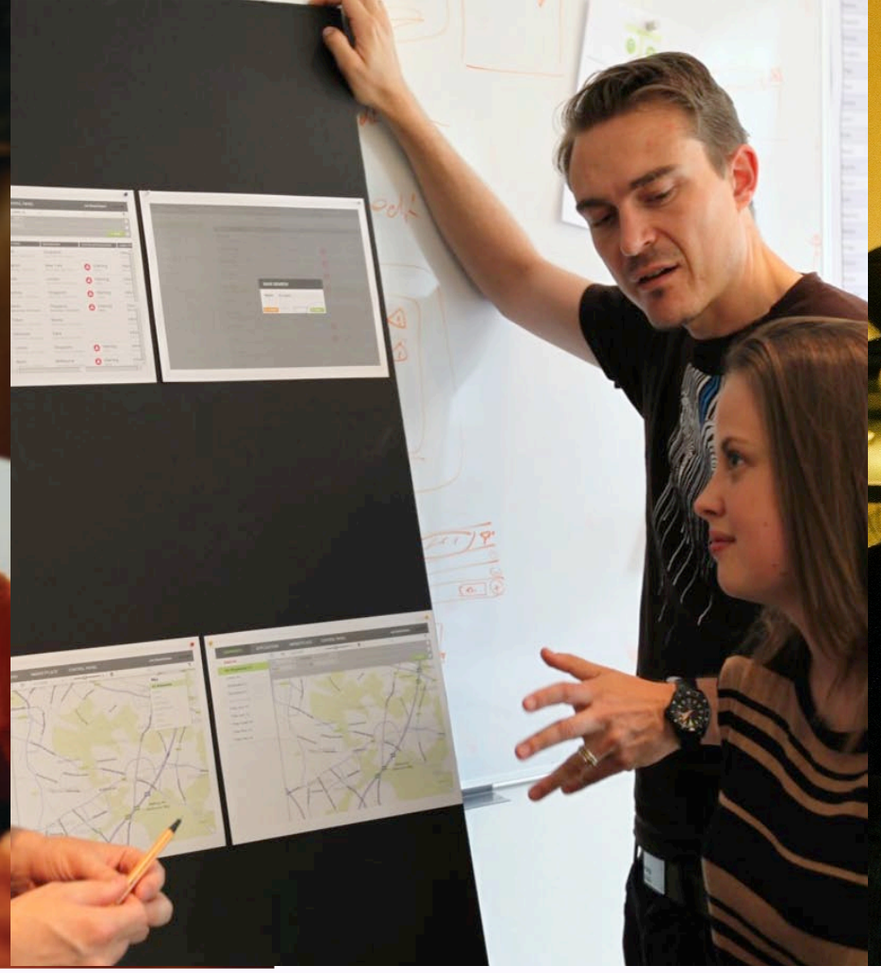
Ottobre 2014 | Politecnico di Milano - Scuola del Design

PARTICIPATORY DESIGN

Engages participants in a dialog around crafted stimuli which can be combined in ways to help participants convey their expectations.

CONCEPT CRITIQUE

Participants provide candid reactions to prototypes or demos of product concepts, by probing to understand why we modify the design solutions to better meet needs.



EXPERIENCE PROTOTYPE

Participants provide candid reactions to prototypes or demos of product concepts, by probing to understand why we modify the design solutions to better meet needs.

COGNITIVE WALKTHROUGH

Modified version of the academic method, allowing us to efficiently gather data on key usability issues and expectation alignment issues in a group session.

USABILITY TESTING

Formalized study to assess the efficiency, satisfaction and effectiveness of a design by providing participants with tasks to complete us a prototype or final product.

USER RESEARCH

BUILDING A RESEARCH PLAN

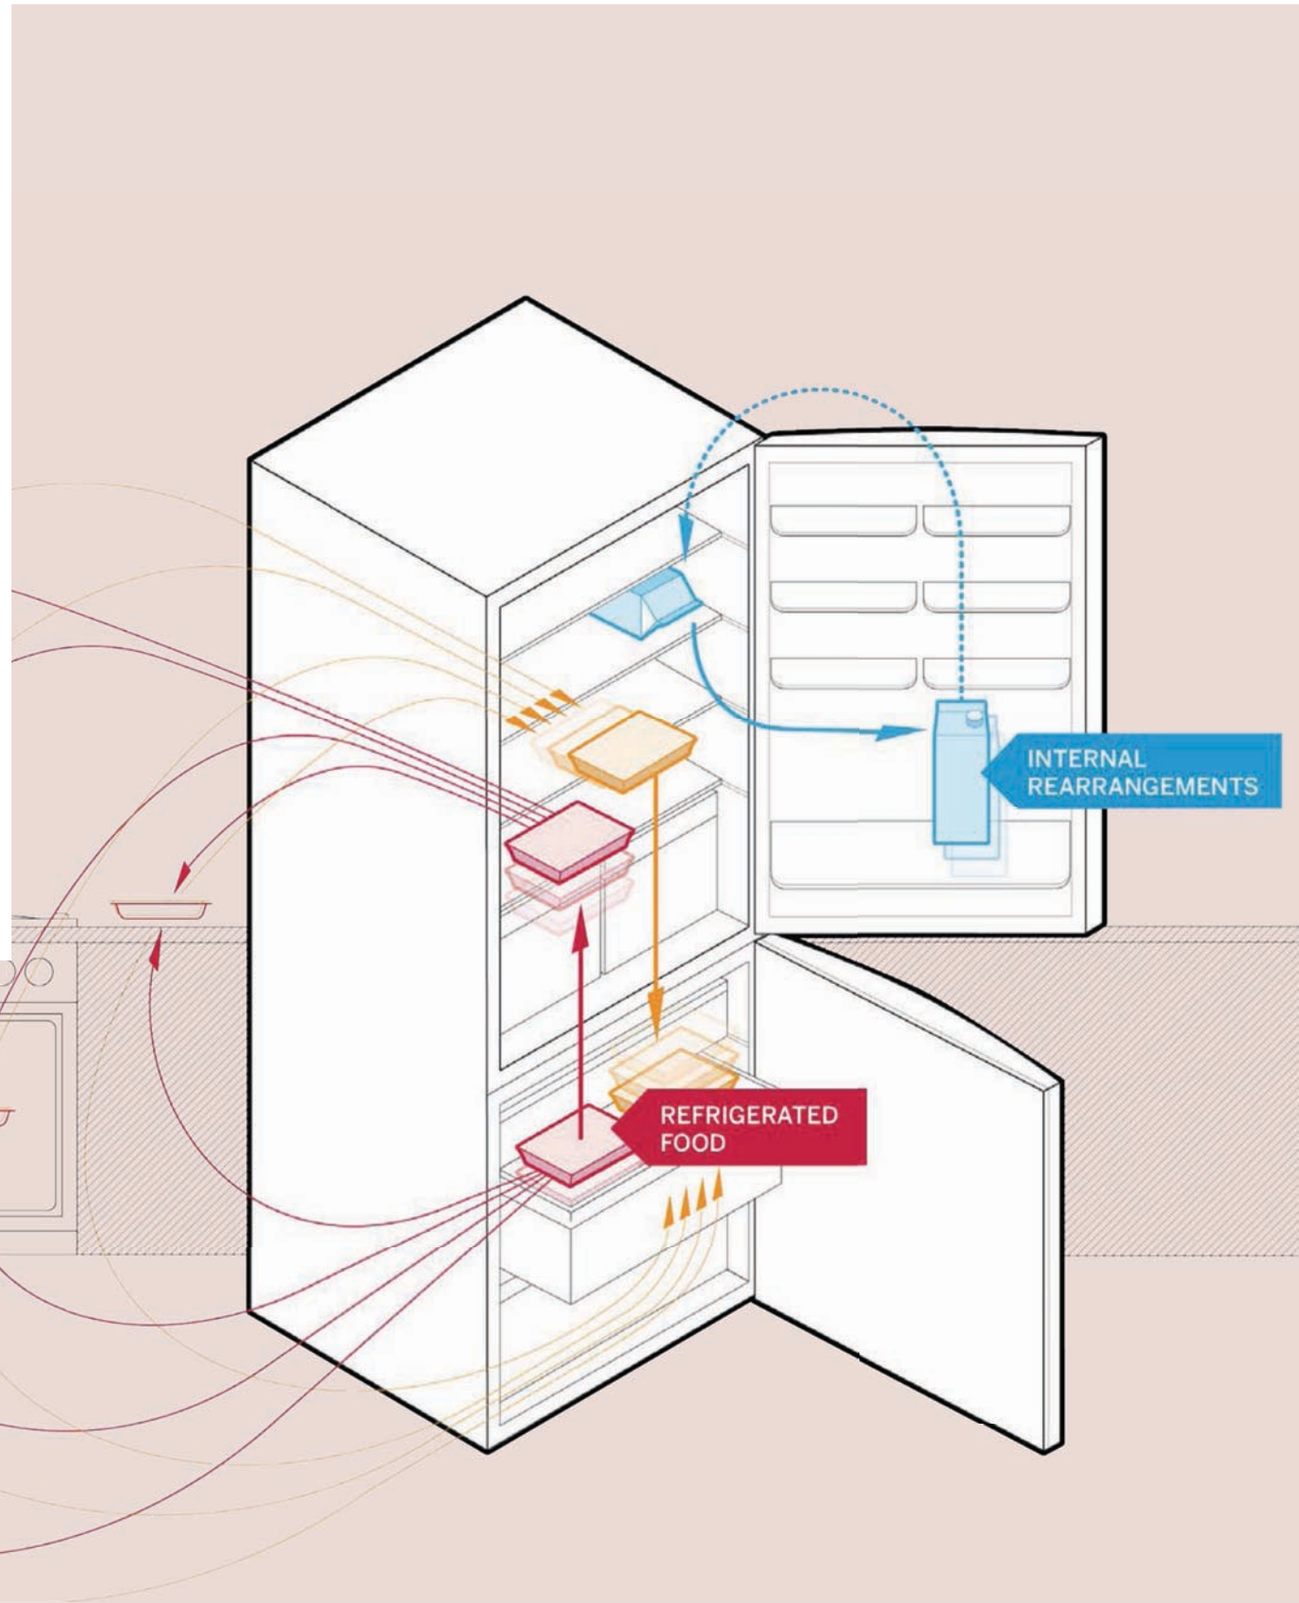
USER RESEARCH

BUILDING A RESEARCH PLAN

Plan the research by defining:

01. Goal
02. Method
03. Participants
04. Locations
05. Time Frame

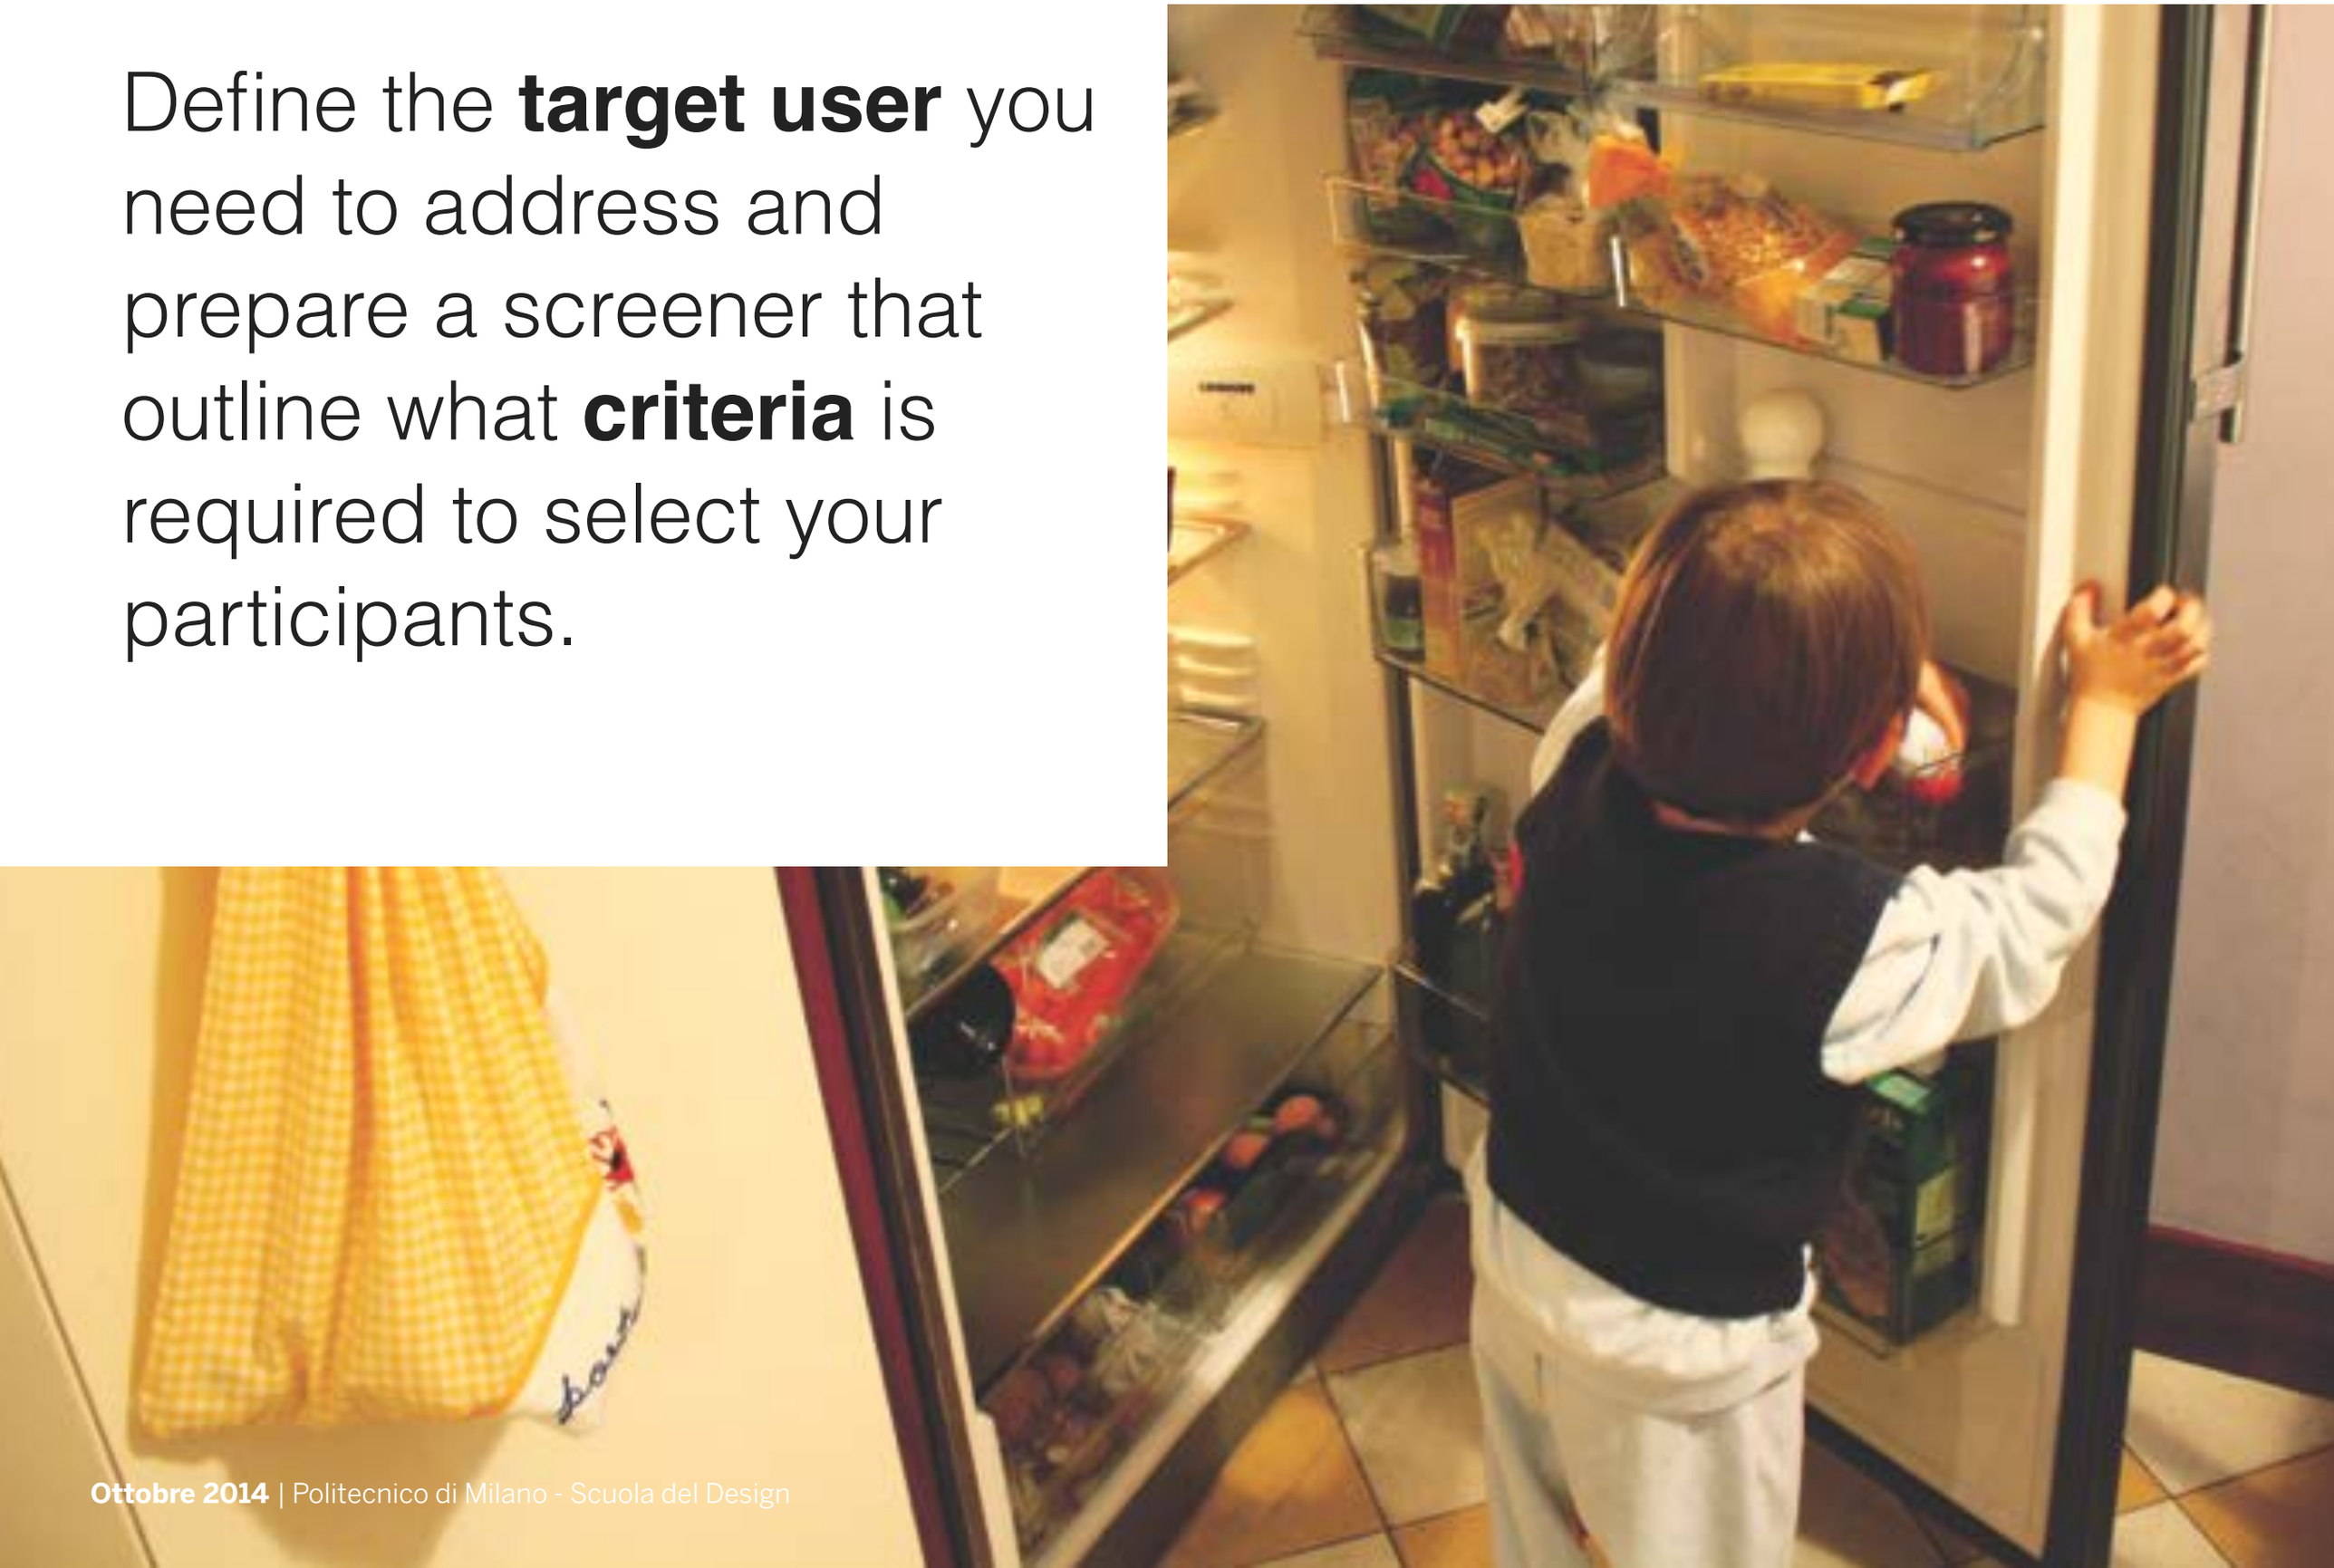
State the **focus** and **objectives** of the research activities based on what you need to design and what you already know.



Define the methods to **engage** the participants in the research activities and collect information.

e.g.: contextual interviews, observations, diary studies, focus groups,...

Define the **target user** you need to address and prepare a screener that outline what **criteria** is required to select your participants.



Target definition

Alcune domande riguardo lei e la sua famiglia

3. Quale delle seguenti intervalli di età rispecchia il suo?

☐ < 24 - **Termina**
☐ 25-45 – Continua
☐ > 46 – **Termina**

4. Household

Quale affermazione rispecchia la sua situazione famigliare?

☐ Vivo solo/a - **Termina**
☐ Io, il mio coniuge / convivente – **Termina**
☐ Io, il mio coniuge / convivente e 1 (o più) bambini – Continua (→4a)

4a. Qual è l'età' dei suoi bambini? (Almeno 1 bambino di età inferiore a 14 anni)

Bambino 1
☐ 0-6 anni – Continua
☐ 7- 13 – Continua
☐ Oltre 14 anni – **Termina**

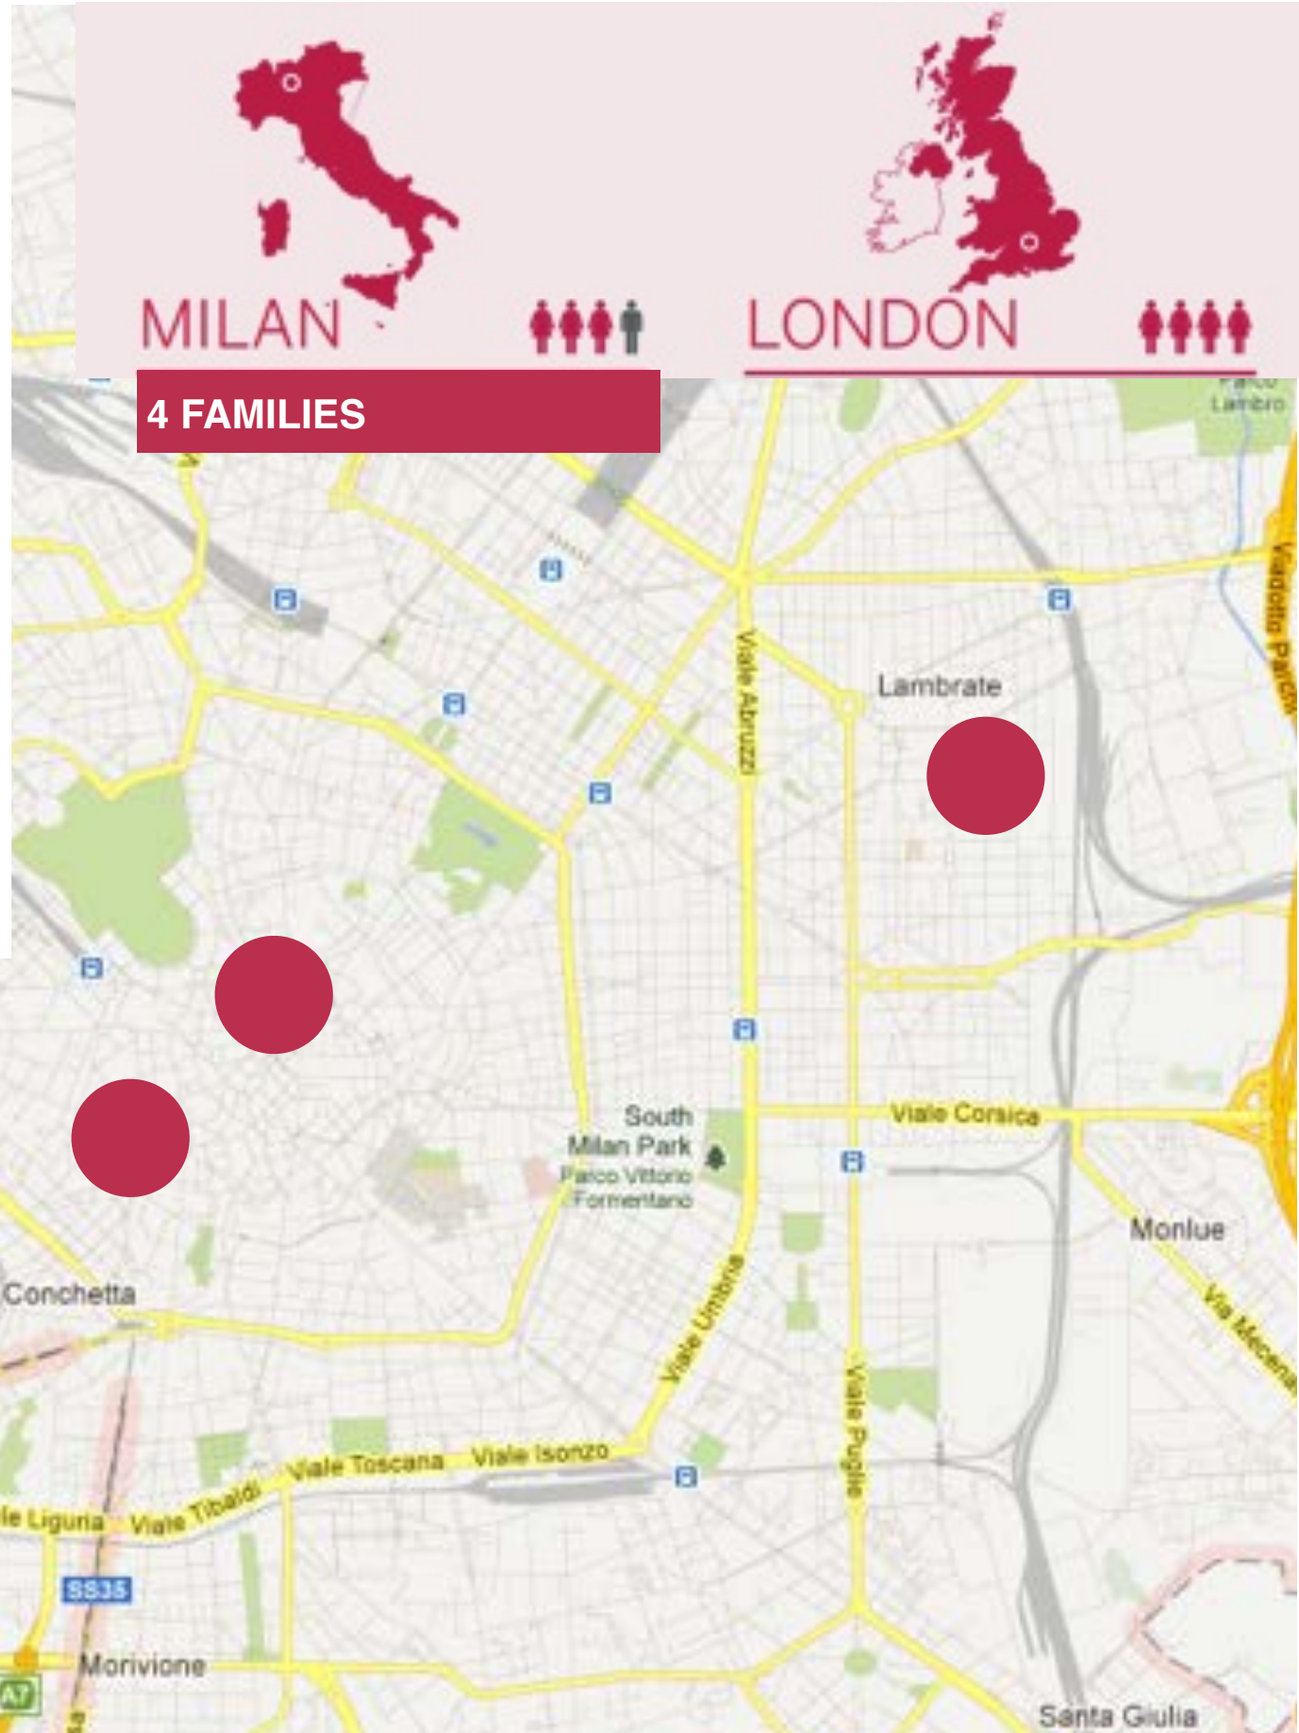
Bambino 2
☐ 0-6 anni – Continua
☐ 7- 13 – Continua
☐ Oltre 14 anni – **Termina**

Crowd-sourced tools can be used to quickly gather input from a broader spectrum of users

Keep a multifaceted perspective

Identify **where** to run your study: define locations according to project scale and focus.

Contextual interviews vs. neutral contexts



Schedule your activities, considering preparation time, field-work, duration of the sessions, debrief and synthesis.

Don’t underestimate travel times between locations

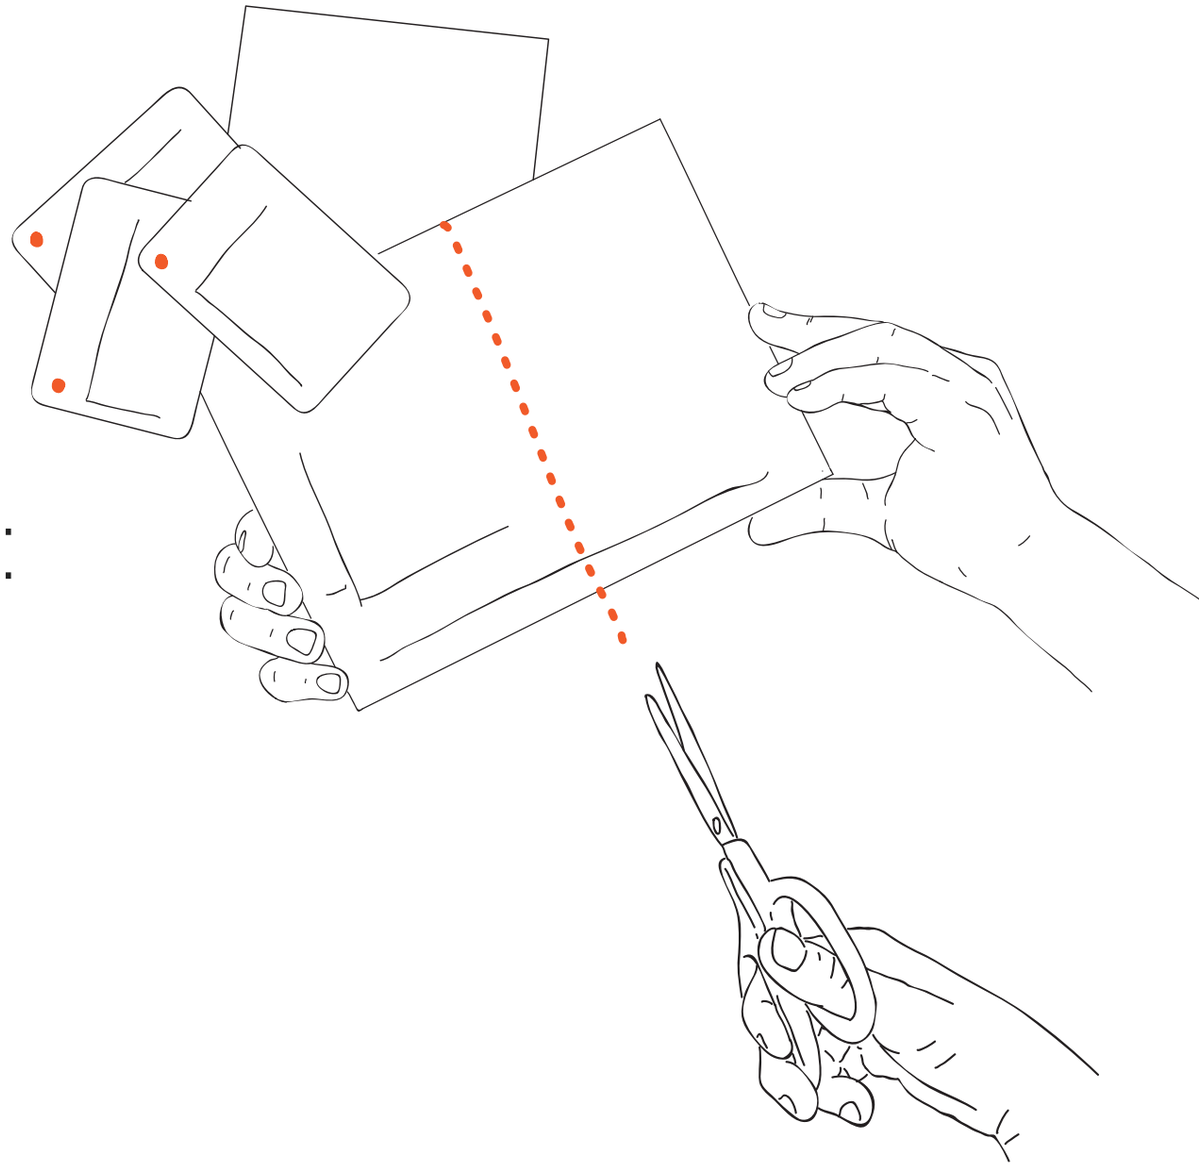
USER RESEARCH
TOOLS & ACTIVITIES

USER RESEARCH
TOOLS & ACTIVITIES

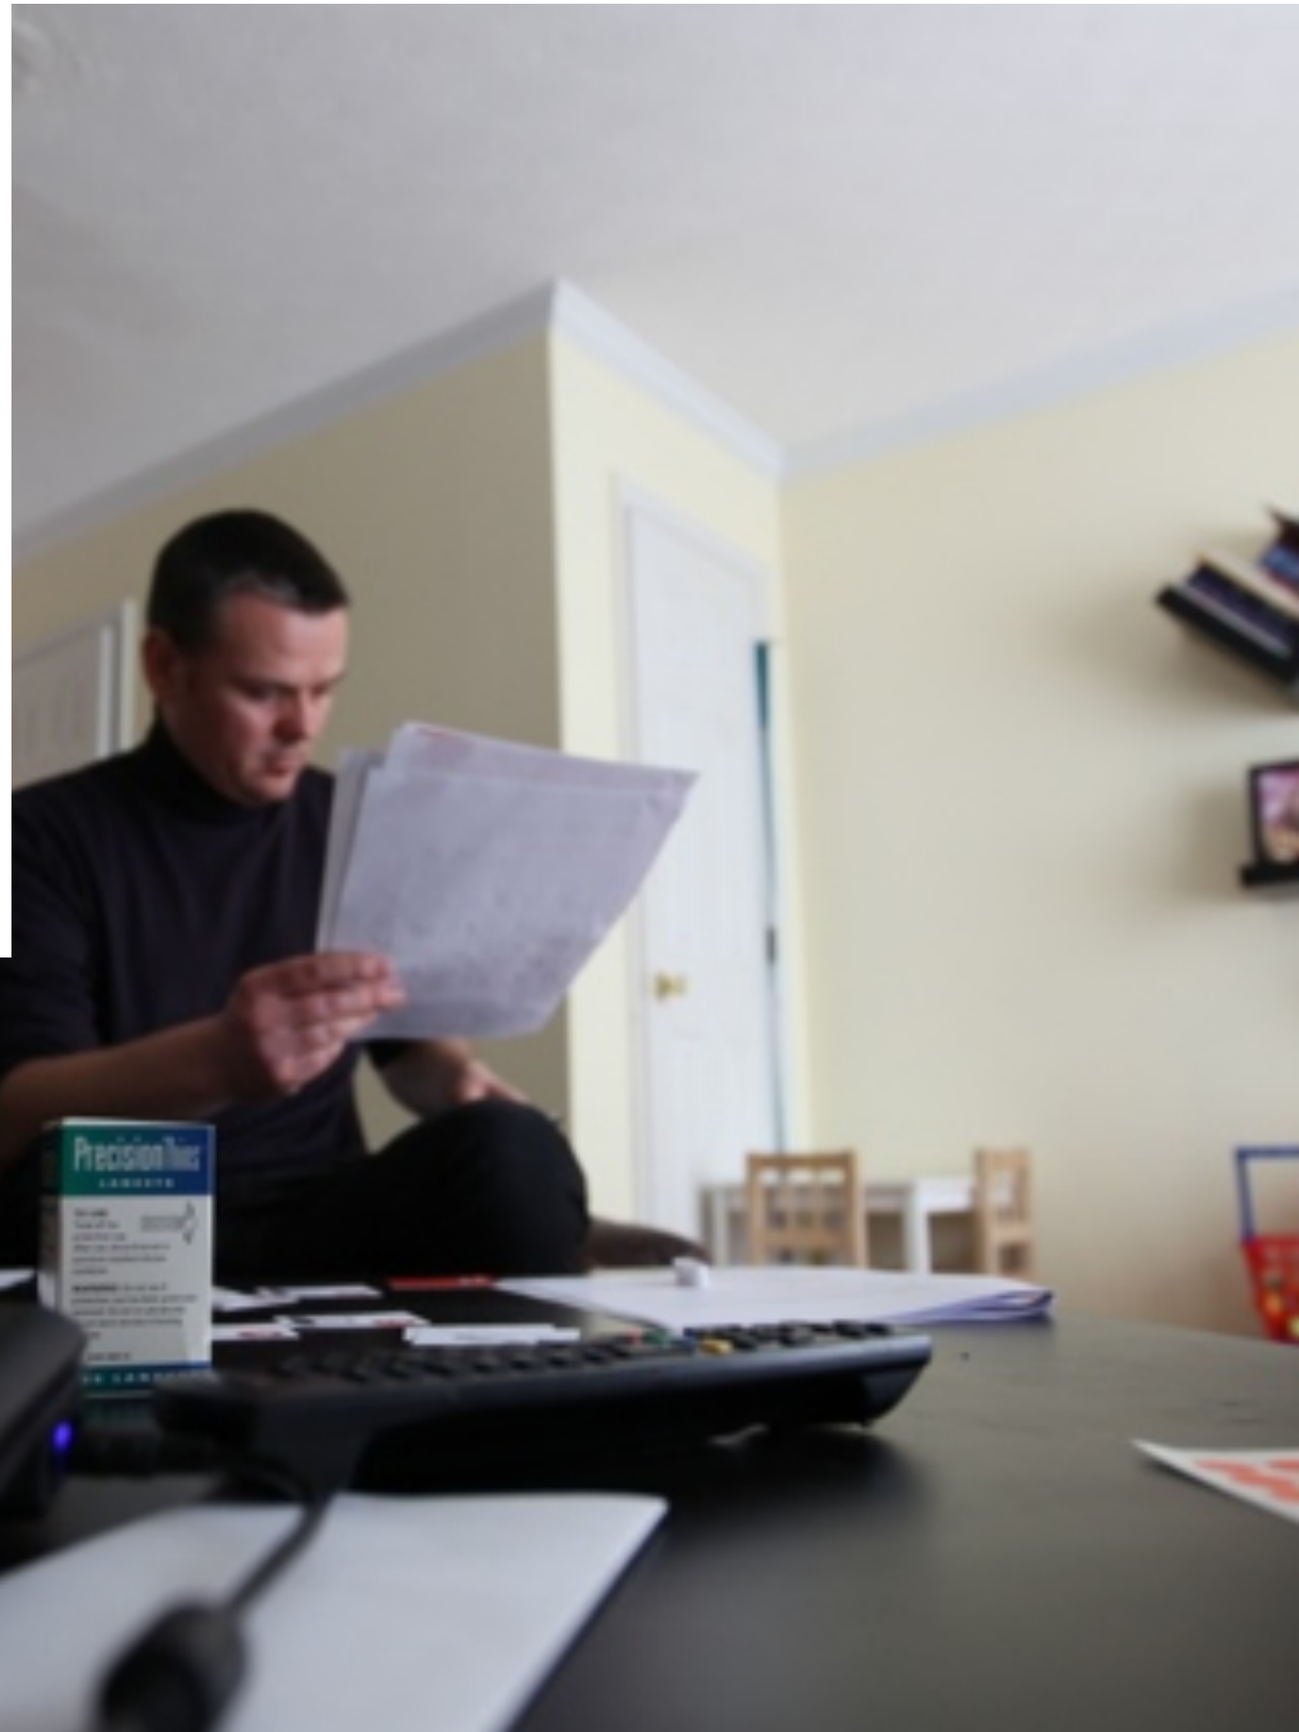
Design the research sessions:

01. Discussion guide
02. Hands-on activities



The discussion guide outlines the **areas of investigation** you plan to focus on, detailing all the questions and activities.

Building a discussion helps defining the flow of the interview **before** *going in the field.*



Areas of investigation

The objective of the research is to understand how the HCPs manage their patients with diabetes. Specific areas of investigation that we have indentified include: (A) HCP workflow, (B) tools & approaches, (C) data analysis.

(A) WORKFLOW
The workflow will be investigated at two different levels: the routine of a typical working day and the sequence of activities during a visit with a PwD.

- DAILY ROUTINE:
  Which is the typical day of the HCP? What are his tasks? How does he manage his time and visits? How is he related to other professional figures (e.g. the assistant)? Which is the balance between work and life?

- PwD VISIT WORKFLOW:
  Which is the sequence of actions/tasks? How long does each activity last? Which are the devices or instruments involved? Which factors have an impact on the way in which the visit is managed?
  A quick simulation of a visit can provide a useful immersion to recover all the aspects, helping the interviewer understanding the whole experience.

(B) TOOLS & APPROACHES
Apart from the specific moment of the visit, how does the HCP manage, support and monitor his patients with diabetes? We've identified 3 areas that can be interesting to explore:

- EDUCATION
- MOTIVATION
- COMMUNICATION

Which tools does the HCP use to educate his patients, motivate his patients and communicate with his patients? Which factors can affect the way in which he approaches these activities?
It's important to see directly those tools if possible.

(C) DATA ANALYSIS
Understanding how the HCP uses and interacts with the patient diabetes-related data is one of the core parts of the interview.
The HCP will be asked to focus on the instruments related to data analysis and specifically on the Information Management software he is using. What information is most relevant? Which are the most recurring paths? What triggers the HCP attention and why?
We'll ask the HCP to walk us through some cases to get to a more complete understanding of the meanings and interaction with the available information. Once more it's important to understand what changes in terms of data management according to the different segments of patients.

Interview guide

We plan to give a brief introductory leaflet to the participants a few days before the inte
order to clarify the main topics we're going to delve into and let them be prepared with
we need to look at.
The interview will be structured as a conversation, guided by a sort of direct simulation
Although each interview will be properly structured, the frog team will ensure adequate
discussion in order to capture as many insights as possible.

Interview introduction: PRELIMINARY QUESTIONS (10 min)
objective: set the tone for the interview and gather few necessary background inform
To begin each interview we will ask some basic information.
Questions will include but not be limited to:

- *What's you role inside this medical practice?*
- *How long have you been working in this practice?*
- *What's your background?*
- *What are your previous working experiences?*
- *Who are your collaborators?*

In addition to the traditional interview, use **hands-on activities** to help push the conversation deeper and into new areas.

e.g.: card sorting, image sorting, collaborative diagrams,...

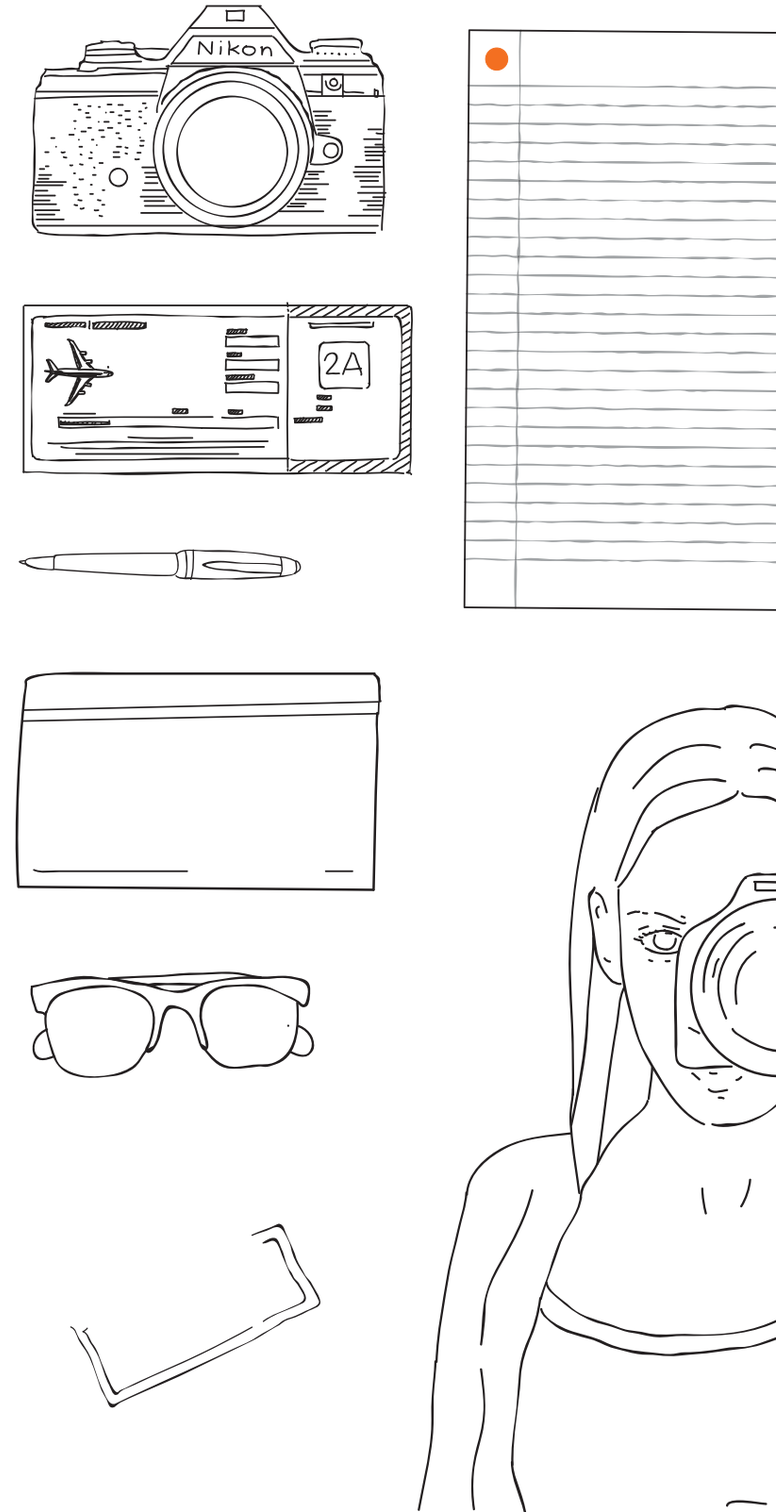
USER RESEARCH

FIELD PREPARATION

USER RESEARCH
FIELD PREPARATION

Prepare the team for the field-work:

01. Permissions
02. Roles & tasks
03. Recording methods
04. Equipment



Release forms establish and **protect the rights** of both you and the participant.

- Ask the permission to record the interview
- Clarify the usage of the material
- Show the photos before asking to sign the disclaimer
- Leave to the participant your contact information

USER RESEARCH

IN-FIELD ACTIVITIES

USER RESEARCH
IN-FIELD ACTIVITIES

Some tips to remember while running the research:

01. Before starting the interview
02. During the interview
03. Data capturing
04. Processing information

Don’t forget to:

(1) observe & capture the context, (2) introduce your equipment and the team, (3) get the participants permissions

Follow some rules:
- Establish credibility
- Remain open minded
- Shape the dialogue
- Consider body language
- **Ask why**

Record the explicit (needs expressed by the participant), **uncover the implicit** (latent needs they don’t initially express).

Interview + observe

While observing and interviewing participants, researchers capture **words, phrases and quotes.**

Field notes can be recorded using different tools (e.g. by hand in a field notebook or digitally with a computer)

03 DATA CAPTURING

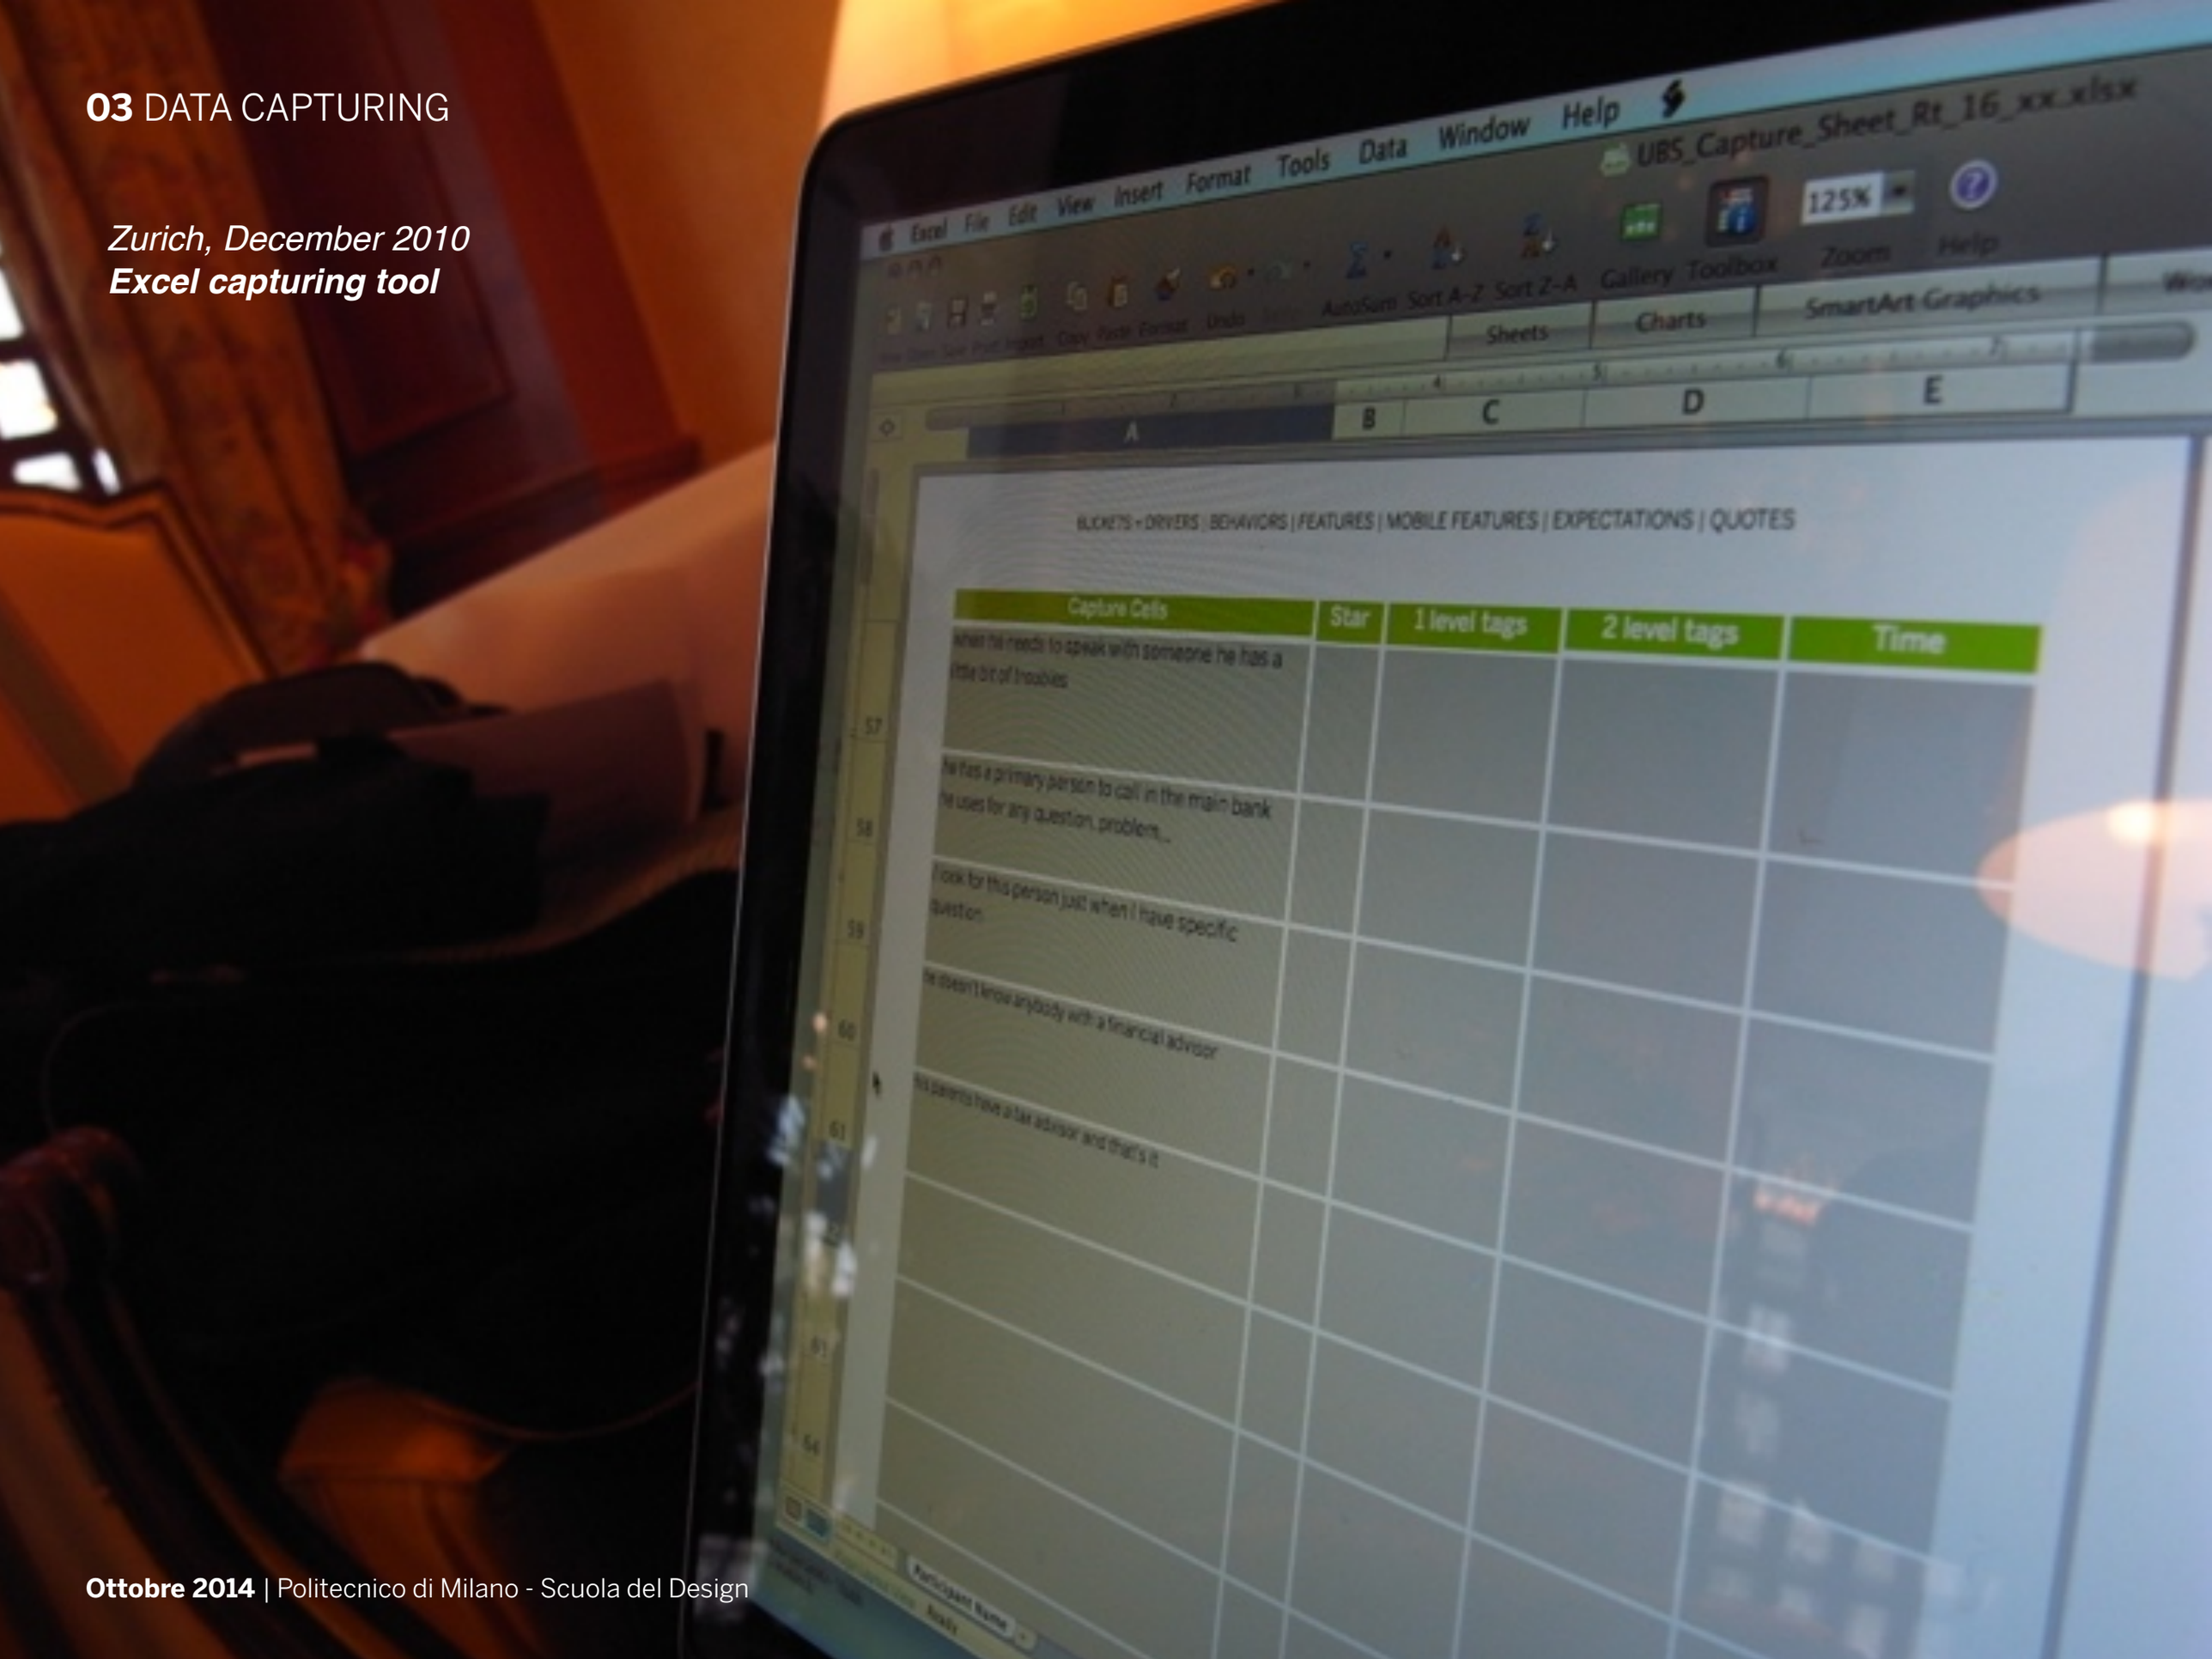
DATA/QUOTES

OBSERVATIONS

INTERPRETATIONS

03 DATA CAPTURING

Zurich, December 2010
Excel capturing tool



Ottobre 2014 | Politecnico di Milano - Scuola del Design

Photographs can capture a spectrum of data, from broad contextual information to specific details.

Gather a wide range of pictures to ensure depth of coverage!

can you show me

Portrait

Capturing **audio** is fairly easy and unobtrusive. Great for re-listening to get detail that you may have missed with your field notes.

Video is one of the most comprehensive data capture techniques, recording the realism of time and the subtleties of emotion.

New Delhi, November 2012
Intercepts

WAFFLE HOUSE

Milan, October 2011

Being participants in your own research

Dedicate time after each interview to process and **capture what you learned** with the other team members.
